

DISTRIBUTION • ASSEMBLY • FABRICATION

M3 was established in 2004 to fill the need for a regional distributor with local inventory focusing on interconnect, passive and electromechanical components.

We strive to earn our customer's loyalty by consistently demonstrating our ability to provide the ultimate customer experience. We achieve this by providing quality products at competitive prices with a level of service that sets us apart.

In 2012, M3 received our ISO 9001:2008 certification. This ensures that we have established procedures and inspection points throughout our business.

DISTRIBUTION

Our business was established with our Distribution division.

We have combined over 60 leading manufacturers of interconnect, passive, electromechanical and electronic hardware with state of the art information technology and an experienced operations team. This enables us to provide products with custom inventory services unique to each customer.

These services can include bonded inventory, consignment inventory, Kanban, auto-replenishment, custom labeling and special packaging.

ASSEMBLY

In 2006, we established our Assembly division.

From our Schleuniger cutting machines to our Cirris test stations, this division prides itself on our ability to understand customer specifications with an attention to quality assurance throughout the entire process.

M3 is able to deliver custom cable assemblies and harnesses including fan assemblies, switch assemblies, flat ribbon cable assemblies, coaxial assemblies, terminal block assemblies, and electromechanical assemblies. We also provide other value added services such as part modification; lead length modification; heatshrink and wire cutting, stripping, termination, and tinning.

FABRICATION

In 2010, we established our Precision Metal Fabrication division.

This knowledgeable fabrication team focuses on shearing, punching, bending, TIG and spot welding, hardware insertion, assembly and CNC machine work. To improve our customer's experience we have a trained team that can accept either Autodesk Inventor or Solidworks CAD files.

We have a reputation for providing quality steel, stainless, or aluminum products including custom brackets, panels, and enclosures.
